2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.
These elements were available or furnished to this Authority in the following language which is:
- ☐ the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	YES
	Claims 1-29	NO
Inventive step (IS)	Claims	YES
	Claims 1-29	NO
Industrial applicability (IA)	Claims 1-29	YES
	Claims	NO

2 Citations and explanations (Rule 70.7)

Citations:-

- (a) US 4988192
- (b) US 4973158
- (c) DE 4406914
- (d) DE 19637812

US 4988192 shows a laser level apparatus with the features of claim 1, except the laser projects along the third axis, then is deflected transverse to the third axis by a prism. Citations b,c and d show laser level devices with a laser rotated and projecting light transverse to the axis of rotation. It would not require an inventive step to arrive at the invention of claim 1 by combining US 4988192 with the other documents. The obvious advantages of the laser arrangement of citations b,c & d could easily be incorporated in US 4988192 by a skilled worker in the art.

DE 4406914 shows a laser level apparatus with the features of claim 1 except for platform means supported on a body and pivotable about a first axis. However, a person using the device of DE 4406914 would realise that it would be advantageous to mount the device for rotation about a first axis as in claim 1. Claim 1 lacks inventive step in the light of DE 4406914 alone. It would also be obvious to use the rotatable laser mounting of DE 4406914 with a three axis supporting arrangement of US 49188192 as mentioned in the above paragraph.

Claims 2-29 add features which would be obvious to a person skilled in the art of laser level devices, some of these features being disclosed in citations a to d in combination.

Horizontal or vertical laser level - has rotating laser beam system with laser diode and collimator on motor shaft and laser power and motor rotational frequency giving visible line on target surface in daylight conditions

BITZER K 96.09.17 96DE-1037812

(98.03.26) G01C 5/00

The device comprises a rotating laser beam system. A laser diode (LD) and collimator (K) are located on the shaft (W) of a motor so that they rotate with it. The rotational frequency of the motor and the power of the laser beam are chosen so that in daylight a visible line appears on the surface targeted by the laser beam.

The height of the visible horizontal line generated can be adjusted by mechanical means. The power supply to the laser diode can be by slip rings

USE - For lining up windows horizontally or street lamp standards vertically and similar operations.

ADVANTAGE - Eliminates the need to use spirit levels with motor suspension designed to facilitate setting the laser beam in horizontal and vertical positions. (5pp Dwg.No.2/2)

(95.09.07) G01C 1/02, G01B 11/27, G01C 15/12

The laser theodolite has a laser carrier (20) rotatably mounted on a horizontal tilt axis (K-K). Its laser output beam (LE) is rotatable in the plane perpendicular to the longitudinal axis (R-R) of the laser carrier. The carrier has a laser head (21) rotatable in the plane of the laser output beam, and which contains a laser diode and alignment optics (211).

The laser carrier contains an additional laser parallel to its longitudinal axis with an alignment beam (LD) perpendicular to the laser output beam. The laser head sits on a motor driven drive shaft on the longitudinal axis. The shaft can be driven by the motor via a belt.

USE/ADVANTAGE - The structural cost of a laser theodolite associated with the installation and adjustment of a rotation prism is eliminated and heightened user friendliness achieved. (5pp Dwg.No.1/2)

2. Citations and explanations (Rule 70.7)

Citations -

- (a) US 4988192
- (b) US 4973158
- (c) DE 4406914
- (d) DE 19637812

US 4988192 shows a laser level apparatus with the features of claim 1, except the laser projects along the third axis, then is deflected transverse to the third axis by a prism. Citations b,c and d show laser level devices with a laser rotated and projecting light transverse to the axis of rotation. It would not require an inventive step to arrive at the invention of claim 1 by combining US 4988192 with the other documents. The obvious advantages of the laser arrangement of citations b,c & d could easily be incorporated in US 4988192 by a skilled worker in the art.

DE 4406914 shows a laser level apparatus with the features of claim 1 except for platform means supported on a body and pivotable about a first axis. However, a person using the device of DE 4406914 would realise that it would be advantageous to mount the device for rotation about a first axis as in claim 1. Claim 1 lacks inventive step in the light of DE 4406914 alone. It would also be obvious to use the rotatable laser mounting of DE 4406914 with a three axis supporting arrangement of US 49188192 as mentioned in the above paragraph.

Claims 2-29 add features which would be obvious to a person skilled in the art of laser level devices, some of these features being disclosed in citations a to d in combination.
